

## Case History

### PROJECT SUMMARY

<b>Client</b>	TGI Fridays
<b>Location</b>	Marion, South Australia
<b>Colour</b>	Light Grey (N35)
<b>Area</b>	Approx. 100m <sup>2</sup>
<b>Installer</b>	Impact Flooring

### COMMENTS

- The sheet vinyl used in the commercial kitchen was deteriorating after two years of service. Major symptoms included cracking (at seams, transitions and drains), splitting and peeling.
- The hot, wet conditions in these areas can lead to bacterial growth within the cracks/gaps and underneath the failed floor. A new floor had to be installed urgently, with a seamless, water-resistant epoxy well suited.
- After the vinyl was removed, it was discovered some sections of leveller underneath had been damaged by moisture. An epoxy leveller was used to re-level the surface in preparation for coating.
- A non-slip finish with an R12 rating was applied as per commercial kitchen requirements at the time.
