

## Case History

### PROJECT SUMMARY

<b>Client</b>	Gilmour Racing
<b>Location</b>	Acacia Ridge, Queensland
<b>Colour</b>	Pipeline Grey (N43)
<b>Area</b>	150m <sup>2</sup>
<b>Installer</b>	Real World Epoxies

### COMMENTS

- The workshop used to service Gilmour Racing's Formula 3 race cars was in desperate need of a flooring restoration after years of operation had taken its toll.
- Aside from removing the worn epoxy paint, the list of preparation work was extensive and included patching car hoist bolts, in-filling drains and sawcuts, and applying a skim coat to flatten countless chips and gouges.
- Once the subfloor work was complete, the Resin Guard™ system was installed. This involved applying a strip of Ezypoly polyurethane topcoat to the exterior section underneath the roller door for added UV protection.
- The new floor was not only well equipped to offer years of service in the harsh workshop conditions, it also looked fantastic and created a much cleaner, more professional environment for the racing team.
