

Case History

PROJECT SUMMARY

Client	RWE Research Labs
Location	Acacia Ridge, Queensland
Colour	Light Grey (N35)
Area	150m ²
Installer	Real World Epoxies

COMMENTS

- A manufacturer was looking to turn a 20-year-old industrial shed into a research and development lab and needed a flooring solution for the uncovered, contaminated concrete slab.
- As a manufacturer that worked with industrial chemicals and operated a forklift on site as well, they required a durable, chemical-resistant finish that could stand up to such exposure.
- While the slab was dirty and had to be treated for extensive surface cracking, it was otherwise in sound condition and the Resin Guard™ system was able to be installed without the need to prime first.
- The new floor not only offered lasting protection, the light grey finish also brightened the space considerably.
